

LIGHTING

SDE has a full understanding of lighting and lighting controls. Our Architectural Lighting designs integrate lighting with the architecture to enhance the space. SDE prepares site lighting plans with calculations using in-house software for submissions to local municipalities. SDE has a proven track record in the design of sports venue lighting for stadiums, natatoriums, and gymnasiums.

All of our lighting designs incorporate energy efficient luminaires and controls that keep our clients well within the requirements of the energy code. Our clients receive a system with low cost of ownership that is comfortable for the occupants, is coordinated with the environment, and is appropriate for the space.

SERVICES

- Architectural Lighting Design
- Site Lighting
- Lighting Controls
