

## TELECOMMUNICATIONS

Technology drives many building systems. SDE has designed the cabling infrastructure and systems for many applications in various building types.

Nearly all buildings today require Information Technology (IT) or data cabling infrastructure with IT rooms. SDE designs the IT cable network for data, voice, video transmissions. Systems such as VoIP, Nurse Call, Video Surveillance, and Audio/Visual utilize the IT cable network. In medical facilities, educational buildings, offices, and industrial sites, SDE has prepared documents for bidding and construction.

With our mechanical and electrical engineers, SDE provides full design services to support the HVAC and power needs of the IT rooms.

## SERVICES

- Data Center Designs
- IT Cabling Infrastructure
- VoIP Systems
- Intercom / Paging Systems
- Audio/Visual Distribution
- Conference Room Systems
- Nurse Call Systems
- Video Surveillance Systems
- Access Control Systems
- Intrusion Detection Systems

## THE SDE ADVANTAGE

Systems Design Engineering, Inc., founded in 1988, is a full-service engineering, construction administration and related services firm. Our core values of respect, quality, and team work are the foundation of our company. It is not only our mission to deliver engineering excellence; it is our passion! We have built lasting relationships on trust, honesty, and personal touch for each client. Let the SDE advantage work for you.
